Allium is a genus of monocotyledonous flowering plants that includes hundreds of species, including the cultivated onion, garlic, scallion, shallot, leek, and chives. The generic name Allium is the Latin word for garlic, and the type species for the genus is *Allium sativum* which means "cultivated garlic".. Carl Linnaeus first described the genus Allium in 1753.

Allium - Wikipedia

Description. *Allium tuberosum* is a rhizomatous, clump-forming perennial plant growing from a small, elongated bulb (about 10 mm, 13/32 inch, across) that is tough and fibrous. Unlike either onion or garlic, it has strap-shaped leaves with triangular bases, about 1.5 to 8 mm (1/16 to 5/16 in) wide. It produces many white flowers in a round cluster on stalks 25 to 60 cm (10 to 24 in ...

Allium tuberosum - Wikipedia

Garlic, Onion, and Other Alliums by Ellen Spector Platt

Allium tuberosum grows wild in East Asia and is cultivated for its garlic-flavored leaves and immature flowers. It forms rhizomes similar to those of chives, and the leaves arise as dense clumps from these rhizomes (Brewster, 1994). Unlike true chives, which has a hollow stem, the leaves of Chinese chives are flat.
