Critically ill patients commonly experience skeletal muscle wasting that may predict clinical outcome. Ultrasound is a noninvasive method that can measure muscle quadriceps muscle layer thickness (QMLT) and subsequently lean body mass (LBM) at the bedside. However, currently the reliability of these measurements are unknown.

The BodyMetrix machine (Intelametrix, Brentwood, CA, USA) was used to measure body composition by ultrasound (<http://www.intelametrix.com/intlBX2000>) and the Bodpod machine (COSMED Srl, Shepperton, UK) was used to measure body composition by ADP. Standard operating procedures were followed for all measurements (Appendix S1). All three techniques used a two compartmental model.

Ultrasound is a noninvasive method that can measure muscle quadriceps muscle layer thickness (QMLT) and subsequently lean body mass (LBM) at the bedside. However, currently the reliability of these measurements are unknown. The objectives of this study were to evaluate the intra- and interreliability of measuring QMLT using bedside ultrasound.

Bedside Ultrasound Is a Practical and Reliable Measurement ...

Ultrasound images of flow, whether color flow or spectral Doppler, are essentially obtained from measurements of movement. In ultrasound scanners, a series of pulses is transmitted to detect movement of blood. Echoes from stationary tissue are the same from pulse to pulse.

Doppler ultrasound: principles and practice

In addition, it has become of practical importance, as the basis

for the astronomical measurement of the velocity of galaxies by the red shift of the spectral lines, in Doppler radar, Doppler laser and Doppler ultrasound.

Basic ultrasound, echocardiography and Doppler ultrasound

Ultrasound is sound waves with frequencies higher than the upper audible limit of human hearing. Ultrasound is not different from "normal" (audible) sound in its physical properties, except that humans cannot hear it. This limit varies from person to person and is approximately 20 kilohertz (20,000 hertz) in healthy young adults. Ultrasound devices operate with frequencies from 20 kHz up to ...
