Introduction. The discovery of culture media allowed the development of microbiology in the nineteenth century [].Bacterial culture was the first method developed to study the human microbiota [], using an artificial medium that allows growth and isolation of bacteria.The first to have cultured a bacterium in a reproducible way was Louis Pasteur in 1860 thanks to the development of the first ...

Bacterial culture through selective and non-selective ...

Obligate anaerobes are microorganisms killed by normal atmospheric concentrations of oxygen (20.95% O₂). Oxygen tolerance varies between species, with some species capable of surviving in up to 8% oxygen,

while others lose viability in environments with an oxygen concentration greater than 0.5%.

Obligate anaerobe - Wikipedia

Pain-related sensory input is processed in the spinal cord before being relayed to the brain. That processing profoundly influences whether stimuli are correctly or incorrectly perceived as painful. Significant advances have been made in identifying the types of excitatory and inhibitory neurons that comprise the spinal dorsal horn (SDH), and there is some information about how neuron types ...

Multiscale computer model of the spinal dorsal horn ...

Aspergillus fumigatus is a saprophytic fungus that plays an essential role in recycling environmental carbon and nitrogen (235, 506, 676). Its natural ecological niche is the soil, wherein it survives and grows on organic debris. Although this species is not the most prevalent fungus in the world, it is one of the most ubiquitous of those with airborne conidia (443, 444, 466).

Aspergillus fumigatus and Aspergillosis
