Kinetic and dynamic modelling situations typical to the pharmacokineticist in the drug industry will be addressed, and two case studies, including single-dose intravenous bolus plasma data and multiple-dose response-time data will be ...

Methodology for pharmacokinetic/pharmacodynamic data analysis

The term pharmacokinetics (PK) refers to the study of. How fast and how completely the drug is absorbed into the body (from the stomach and intestines if it's an oral drug) How the drug becomes distributed through the various body tissues and fluids, called body compartments (blood, muscle, fatty tissue, cerebrospinal fluid, and so on). To what extent (if any) the drug is metabolized ...

Pharmacokinetics (from Ancient Greek pharmakon "drug" and kinetikos "moving, putting in motion"; see chemical kinetics), sometimes abbreviated as PK, is a branch of pharmacology dedicated to determine the fate of substances administered to a living organism. The substances of interest include any chemical xenobiotic such as: pharmaceutical drugs, pesticides, food additives, cosmetics, etc.
