The Most Complete ASP.NET AJAX Documentation | Telerik UI ...

Build secure apps. ASP.NET supports industry standard authentication protocols. Built-in features help protect your apps against cross-site scripting (XSS) and cross-site request forgery (CSRF). ASP.NET provides a built-in user database with support for multi-factor authentication and external authentication with Google, Twitter, and more.

ASP.NET | Open-source web framework for .NET

Microsoft's ASP.NET technology brings an object-oriented and event-driven programming model and unites it with the benefits of compiled code. However, its server-side processing model has several drawbacks inherent in the technology, many of which can be addressed by the new features included in the Microsoft ASP.NET 3.5 AJAX Extensions.

Understanding ASP.NET AJAX UpdatePanel Triggers ...

Visual Studio 2005 had similar templates when ASP.NET 2.0 AJAX Extensions were installed. However, in Visual Studio 2008, the AJAX Extensions are opt-out by default (that is, they are referenced by default, but can be removed as references). (Click to view full-size image) Press F5 to launch your website.

Bingo, our service is ready to 'serve'. Time to build clients that access this 'Service' Building an HTML Client. We could have built an ASP.NET, Console or WinForms client but to show that the self-host service is truly independent, we'll build an HTML page with a few JavaScript references only and consume the service from it.

Cloud computing is a way to deliver computing as a service rather than a product. It is completely based on the Internet. Cloud computing provides on-demand hardware (like Server), storage, application hosting, and other services. In this way, it reduces the need for having your local servers or personal devices to configure and manage your services and applications.

TabTight - VPN Free Cloud File Manager

A web api endpoint (controller) is a single resource that accepts get/post/put/delete verbs. It is not a normal MVC controller.. Necessarily, at /api/VTRouting there can only be one HttpPost method that accepts the parameters you are sending. The function name does not matter, as long as you are decorating with the [http] stuff.I've never tried, though.

c# - Multiple HttpPost method in Web API controller ...

The programming model, routing and navigation, and the render tree, which is Blazor's mechanism for calculating UI changes. The part I want to focus on though is the programming model. Out of the four hosting models I talked about above, the first three have one thing in common, they all understand web standards.

What's behind the hype about Blazor? - Stack Overflow Blog

Password requirements: 6 to 30 characters long; ASCII characters only (characters found on a standard US keyboard); must contain at least 4 different symbols;
