The dismembered type of pyeloplasty (called an Anderson-Hynes pyeloplasty) is the most common type of pyeloplasty. This was described in relation to retrocaval ureter (now renamed as preureteric vena cava). Another technique of pyeloplasty is Culp's pyeloplasty; in this method a flap is rotated from dilated pelvis to decrease narrowing of ureter.

An X-ray image intensifier (XRII) is an image intensifier that

converts X-rays into visible light at higher intensity than the more traditional fluorescent screens can. Such intensifiers are used in X-ray imaging systems (such as fluoroscopes) to allow low-intensity X-rays to be converted to a conveniently bright visible light output. The device contains a low absorbency/scatter input window ...

O uréter ou ureter é um tubo feito de músculo liso que impulsiona a urina dos rins para a bexiga urinária. No adulto humano, os ureteres têm geralmente 20-30 cm de comprimento e cerca de 3-4 mm de diâmetro. O ureter é revestido por células uroteliais, um tipo de epitélio transicional, e possui uma camada de músculo liso adicional no terço mais próximo da bexiga que auxilia no ...

A Brief History of The Flush Toilet. From Neolithic to modern times. It is unclear who first invented the flush toilet. Although archaeological excavations in northwest India have revealed 4000-year-old drainage systems which might have been toilets, it is not clear whether this is genuinely the case.
