Hobby Farms Civil Engineers that are geotechnical engineers deal with many types of problems. Almost all of these problems are the result of three properties soil strength issues, settlement of structures that rest on the soil and soil permeability.

In civil engineering the non-linear property is used to great advantage in the pile foundation for a building on very soft soil, underlain by a layer of sand. In the sand below a thick deposit of soft clay the

stress level is high, due to the weight of the clay.

More PE problems will be added over time, but what I have should help to get you started preparing. I highly encourage you to pause the video at the beginning and solve the problem yourself and then resume play and watch how I did it. Doing that will get you in tune with working these out first before rushing to see a solved problem.
