Statistics And Data Analysis In

If you're a statistician, instead of "vast amounts of data" you'll usually have a limited amount of information in the form of a sample (i.e. a portion of the population); Data analysis is performed on this sample, using rigorous statistical techniques. Both data scientists and statisticians use data to make inferences about consumer cohorts, a general population, or target market. However, they will approach the issue of data analysis quite differently.

Difference between Data Analysis and Statistical Analysis ...

There are few well know statistics are the average (or "mean") value, and the "standard deviation" etc. Standard deviation is the variability within a data set around the mean value. The "variance" is the square of the standard deviation. The linear trend is another example of a data "statistic". Steps in the Data Analysis Process
