The XML Document Type Declaration, commonly known as DTD, is a way to describe XML language precisely. DTDs check vocabulary and validity of the structure of XML documents against grammatical rules of appropriate XML language. An XML DTD can be either specified inside the document, or it can be kept in a separate document and then linked separately.

XML - DTDs - Tutorialspoint

XML does not require a DTD. When you are experimenting with XML, or when you are working with small XML files, creating DTDs may be a waste of time. If you develop applications, wait until the specification is stable before you add a DTD. Otherwise, your software might stop working because of validation errors.
